LUMINA-30

AI Incident Review Framework

(Pre-Irreversibility Civilizational Review Template)

---

1. Incident Overview

事故概要

Date of incident
事故発生日

Organizations involved
関係組織

AI system type
AI システムの種類

Operational environment
運用環境
(Research / Infrastructure / Autonomous system / Experimental deployment)

Short incident description
事故の概要

Plain description of the incident.
What occurred and how it was first detected.
Initial system behavior and observed impact.

This template is part of the LUMINA-30 reference structure.
Public reference repository:
https://github.com/gsx750ss-dev/Lumi30-Index

2. Incident Classification

事故分類

Select applicable category
該当カテゴリを選択

☐ Autonomous research system
自律研究システム

☐ Recursive improvement attempt
自己改善 / 再帰的改良の試行

☐ Tool-chain escalation
ツールチェーン拡張

☐ Infrastructure interaction
インフラシステムとの相互作用

☐ Autonomous operational behavior
自律運用行動

☐ Other
その他

---

3. System Capability Profile

システム能力プロファイル

Model class
モデル種別

Training paradigm
学習方式
(Self-supervised / Reinforcement / Hybrid / Unknown)

External tool access
外部ツールアクセス

☐ None
☐ Restricted
☐ Broad
☐ Unknown

External environment interaction

☐ Simulation only
☐ Digital infrastructure
☐ Physical systems

---

4. Control and Oversight Structure

制御および監督構造

Human oversight model
人間監督体制

☐ Direct supervision
☐ Periodic supervision
☐ Post-hoc monitoring
☐ No effective supervision

Intervention capability

☐ Immediate shutdown available
☐ Delayed intervention
☐ Indirect control only
☐ No reliable control

Decision authority

☐ Human approval required
☐ Human advisory only
☐ System autonomous

---

5. Pre-Irreversibility Boundary Assessment

不可逆境界評価

This section examines whether the system behavior approached or crossed a potential **irreversibility threshold**.

このセクションではシステム行動が **不可逆境界（Irreversibility Threshold）** に接近または到達したかを評価する。

Evaluate the following conditions:

A. External irreversible impact

☐ None
☐ Potential
☐ Observed

外界への不可逆的影響

B. Loss of human decision authority

☐ No loss
☐ Partial degradation
☐ Effective loss

人間の最終判断権の喪失

C. Autonomous capability escalation

☐ No escalation
☐ Controlled escalation
☐ Unbounded escalation

自律能力の拡張

6. Institutional Responsibility Structure

制度的責任構造

Responsible institution

責任主体

Operational control authority

運用管理主体

Oversight body

監督機関

Responsibility continuity

責任連続性

☐ Clearly defined
☐ Partially defined
☐ Undefined

---

7. Intervention Feasibility

介入可能性評価

Evaluate whether meaningful human intervention remained possible.

人間による有効な介入が可能であったかを評価する。

Stop capability

☐ Immediate stop possible
☐ Delayed stop possible
☐ Stop ineffective
☐ No stop mechanism

Operational containment

☐ Full containment
☐ Partial containment
☐ No containment

---

8. Incident Outcome

事故結果

System status

☐ Controlled shutdown
☐ System rollback
☐ Ongoing investigation
☐ Unresolved system behavior

Impact scope

☐ Research environment
☐ Institutional systems
☐ Infrastructure systems
☐ External environment

---

9. Structural Lessons

構造的教訓

Identify structural weaknesses revealed by the incident.

事故によって明らかになった構造的問題

Examples:

Oversight failure
Insufficient intervention mechanisms
Responsibility fragmentation
Escalation pathways not previously identified

---

10. Post-Incident Stabilization Measures

事故後安定化措置

Possible stabilization responses:

- Operational suspension
- System architecture review
- Oversight restructuring
- Independent audit

---

11. Civilizational Boundary Reflection

文明境界レビュー

This section examines whether the incident revealed a condition where

human judgment, responsibility, or intervention capability
could be structurally bypassed.

本セクションでは以下の観点を検討する:

- 人間判断の排除
- 責任主体の断絶
- 介入不能状態の形成

---

12. Review Classification

レビュー分類

☐ Technical incident
技術事故

☐ Governance failure
ガバナンス不全

☐ Structural oversight gap
制度監督ギャップ

☐ Boundary-condition warning
文明境界警告

Framework Position Statement

本フレームワークの位置づけ

This framework does not prescribe technical solutions, policy mandates, or enforcement mechanisms.

本フレームワークは
技術設計・政策義務・規制措置を提示するものではない。

It provides a structured reference for examining incidents involving advanced autonomous systems prior to potential irreversibility conditions.

本フレームワークは
高度自律システムに関する事故を
不可逆条件以前の段階で検証するための参照構造を提供する。
